

● G first activation ◆ F first activation | task_start ▲ baseline_ready — contact = 0 s - - - nominal F gate = +0.20 s

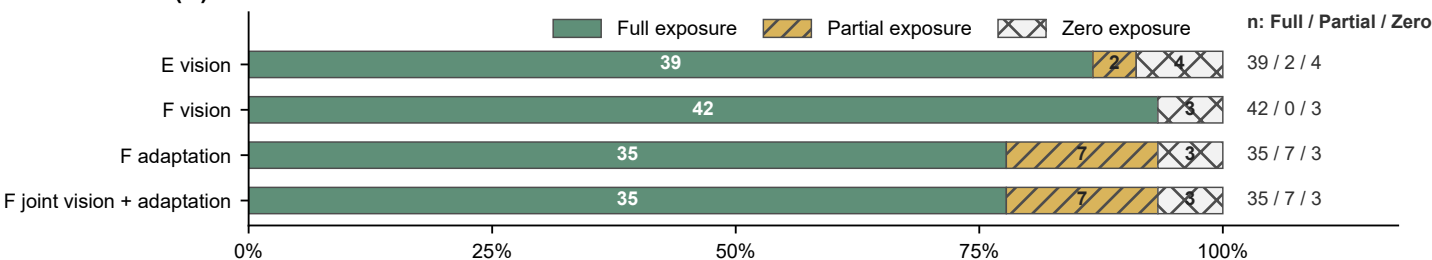

(A) G: raw-force-rule activation

(B) F: nominally gated activation

(C) Outcome-window exposure: contact +0.20 to +1.00 s

Outcome-window exposure (% of 45 trials)
Trial-level displays characterize intervention fidelity; human outcome inference uses participant n=5.
