

(A) Fidelity evidence narrows what each contrast can support

Constrained = narrowest comparison supported by specification, delivery, exposure, provenance, and analysis unit.

(B)

Primary operational force outcome

E - A summary

Mean difference -0.3489 N·s
95% CI [-0.6080, -0.0898]
Participants below zero 5/5

paired t: raw $p=0.0201$
paired t: Holm $p=0.0633$
exact sign-flip $p=0.0625$
Exploratory; not a mechanism-isolated causal effect.

Participant-level inference uses $n=5$ independent participants (9 selected trials per participant/configuration); E is a bundled assignment with heterogeneous visual exposure.
